Anthony Antonelli Andrade

Porto Alegre, Brazil (UTC-3, full overlap with US business hours) | antonellia.dev@gmail.com
linkedin.com/in/anthony-antonelli-andrade | antonelliaa.github.io | github.com/AntonelliAA

Mobile developer with 3 years of experience. I was the only mobile developer on odinPedidos, a B2B ERP published on both stores that serves 50+ paying clients today. I write native iOS in Swift and SwiftUI, React Native when the project calls for it, and backend in Vapor and Node.js.

SKILLS

iOS: Swift, SwiftUI, UIKit, Xcode, Core Data, SwiftData, StoreKit 2, MapKit, XCTest, Swift Concurrency, App Store Connect, TestFlight
Cross-platform: React Native, Expo, TypeScript
Backend and data: Vapor, Node.js, PostgreSQL, MySQL, REST APIs, Python, Power BI
Infrastructure: Docker, AWS (EC2, RDS, S3, SQS), CI/CD, Git
Architecture: MVVM, MVC, Clean Architecture
Languages: Portuguese (native), English B2 (CEFR), Bayswater College London

EXPERIENCE

iOS Developer | Apple Developer Academy PUCRS | Porto Alegre, Brazil | Feb 2025 - Present

- Shipped an iOS game to the App Store, from first commit to Apple review, with 100 downloads in the first week. Wrote the game logic and the interface in **Swift, SwiftUI and UIKit**, the in-app purchases with **StoreKit 2**, and ran the **App Store Connect** submission.
- Wrote the backend and ran the deploy for an event check-in app, on a team of 5, with **Swift, Node.js and PostgreSQL**. Also built the map screens with **MapKit** and the **REST API** integration.
- Covered business logic, purchase flows and the networking layer with **XCTest and Swift Testing**, on an **MVVM** architecture with persistence in **Core Data and SwiftData**.
- 3rd place out of 10 teams at the PUCRS Software Engineering Hackathon, on the first team in the event's history to use native iOS. We shipped a **TestFlight** build during the marathon, in **Swift/UIKit + Go**.

Software Engineer | GPSET Engenharia | Guaíba, Brazil | Jan 2024 - Feb 2025

- Built a **Python** pipeline that pulls **SAP** and equipment data into **Power BI** dashboards. Cost analysis dropped from one week to a single day.
- Developed and maintained fullstack web applications in **TypeScript, React and Node.js** for internal operations.
- Handled the **CI/CD** pipelines and the deployment workflow, with daily or weekly releases depending on the project.
- Reviewed legacy **JavaScript** codebases in an agile team.

Mobile Developer (iOS & React Native) | Plugways Digital | Guaíba, Brazil | Jan 2023 - Jan 2024

- Was the only mobile developer on **odinPedidos**, a B2B order management ERP I built from scratch and published on the App Store and Google Play. It serves **50+ paying clients** today. Wrote every screen, CRUD flow and REST API integration in **React Native, Expo and TypeScript**, and ran both store submissions.
- Configured **iOS** capabilities, permissions and push notifications from scratch.
- Built web interfaces in **Angular** and backend services in **PHP, Node.js and MySQL** for other clients, one of them with 100+ weekly users.
- Managed the deployments on **AWS** (EC2, RDS, S3, SQS).

PROJECTS

Palco | Swift 6, SwiftUI, on-device speech recognition | 2026
Speech coaching app. No audio leaves the iPhone, so transcription and analysis run on the device itself, with no server. The metrics are deterministic (filler words, pace, pauses) and AI only handles the qualitative feedback, which keeps rehearsals comparable to each other. Concurrency with actors and Sendable.

Real-time retrospective backend | Swift (Vapor), PostgreSQL, WebSockets | 2025
REST API and WebSocket broadcast for card voting in agile team retrospectives. The hard part was concurrency: I used atomic PostgreSQL operations so votes are not lost when several connections write at the same time.

EDUCATION

B.Sc. Software Engineering | PUCRS | 2024 - 2028
Apple Developer Academy PUCRS | iOS Development Program | 2025 - 2027
Technical Degree in Computer Science | EEEP Dr. Solon Tavares | 2021 - 2023
